

graph M , orientations σ

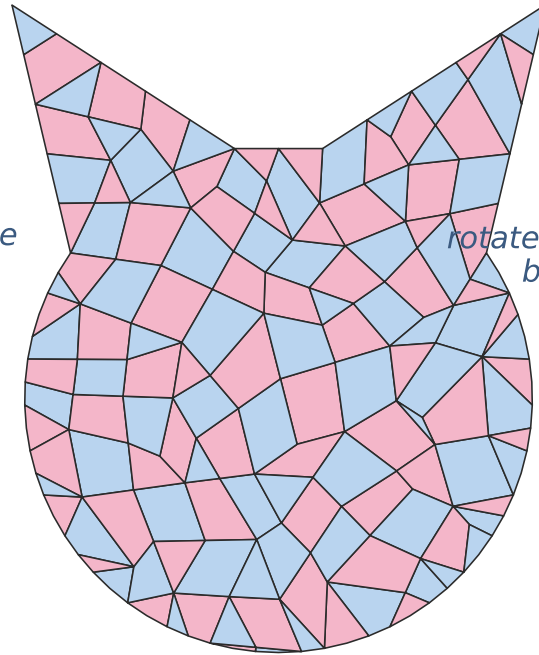

138 faces, 28 split cuts,
shape space of dim. 28

projection X_0 (Eq. 6), $\theta = 0.35$

$\Theta_{\max} = 0$: 20 faces penetrate;
split cuts close inward at 0^+

our embedding X , $\theta = 0$

same null space; every corner convex,
every split cut opens outward

deployed, $\theta = 0.70$

exact $\Theta_{\max} = 2.34$ rad,
certified $\varepsilon_{\max} = 2.34$ rad
