

planar graph M , orientations σ

134 faces, 35 split cuts,
shape space of dim. 35

cut, project
(Eq. 6)

published projection X_0 (Eq. 6), $\theta = 0.35$

$\Theta_{\max} = 0$: 22 faces penetrate;
split cuts close inward at 0^+

maximise the
 0^+ margin

range-maximising embedding X , $\theta = 0$

same null space; every corner convex,
every split cut opens outward

rotate every face
by $\sigma\theta/2$

deployed, $\theta = 0.70$

exact $\Theta_{\max} = 2.57$ rad,
certified $\epsilon_{\max} = 2.57$ rad
