

planar graph M , orientations σ

138 faces, 28 split cuts,
shape space of dimension 28

cut, project
(Eq. 6)

published projection X_0 (Eq. 6), $\theta = 0.35$

$\Theta_{\max} = 0$: 20 faces already penetrate;
split cuts close inward at the instant of opening

maximise the
 0^+ margin

range-maximising embedding X , $\theta = 0$

same null space, every corner convex,
every split cut opening outward

rotate every face
by $\sigma\theta/2$

deployed, $\theta = 0.70$

exact $\Theta_{\max} = 2.34$ rad,
certified $\varepsilon_{\max} = 2.34$ rad
